

DARSHAN PRABHAKAR

Bengaluru, India | darshanprabhakar66@gmail.com | +91 99022 15280

LinkedIn: linkedin.com/in/h-darshan-64722b299 | GitHub: github.com/Darshan-git00

SUMMARY

Recent engineering graduate with practical experience in Java backend development through professional apprenticeship and fellowship programs. Proficient in Spring Boot, RESTful API development, and MySQL database design. Full-stack developer with experience in React and modern web technologies.

EDUCATION

Bachelor of Engineering in Information Science and Engineering

Dec 2021 – June 2025

Vivekananda Institute of Technology, Bengaluru

CGPA: 8.3/10.0

TECHNICAL SKILLS

Programming Languages: Java (Java 8), SQL, JavaScript (ES6+), HTML5, CSS3

Frameworks & Technologies: Spring Boot, Spring MVC, Spring Core, Spring Data JPA, Hibernate, REST APIs, JDBC, Servlets, JSP, Thymeleaf, React.js, Bootstrap

Database Technologies: MySQL, Database Design, Query Optimization, Indexing, SQL Joins

Development Tools & Platforms: Git, GitHub, Maven, IntelliJ IDEA, Eclipse, Visual Studio Code, Docker, AWS (EC2, S3), Linux

Core Competencies: Object-Oriented Programming (OOP), MVC Architecture, RESTful Web Services, Microservices Architecture, Collections Framework, Lambda Expressions, Streams API, Multithreading, Exception Handling, Design Patterns

Software Development Practices: Agile/Scrum Methodology, Version Control (Git), Code Review, Unit Testing, API Development, CI/CD, Database Management

PROFESSIONAL EXPERIENCE

Pentagon Space Pvt Ltd

Apprentice Software Developer

Bengaluru, India

Jan 2025 – Aug 2025

- Developed and maintained enterprise Java web applications using Servlets, JSP, and JDBC following MVC architecture in an Agile environment
- Implemented secure backend modules for user authentication and product management, emphasizing data retrieval efficiency
- Collaborated with cross-functional teams to resolve UI defects and optimize database queries, resulting in improved page load performance
- Participated in code reviews and sprint planning sessions, contributing to iterative feature development and team knowledge sharing

Polygnan Foundation

Software Development Fellow

Remote

Oct 2024 – Dec 2024

- Developed TalentBridge, a skill-based campus placement platform using Spring Boot, Spring MVC, and MySQL

- Designed and implemented RESTful API endpoints using Spring REST Controllers for user authentication, profile management, and skill assessment functionality
- Created a responsive web interface using JSP, Thymeleaf templates, and Bootstrap, adhering to mobile-first design principles and accessibility standards
- Leveraged Spring Data JPA and Hibernate ORM for efficient database operations and data persistence layer implementation
- Integrated AI-powered development tools to accelerate prototyping and streamline feature iteration cycles

PROJECTS

PetHub — E-commerce Web Application

2025

Technologies: Java EE, Spring Framework, JSP, Servlets, MySQL, React.js, HTML5, CSS3, Bootstrap

- Developed a full-stack e-commerce web application for pet product inventory and order management with complete end-to-end functionality
- Designed a normalized MySQL database schema with multiple relational tables for products, users, orders, and transactions, implementing proper primary and foreign key relationships
- Built a RESTful backend using JSP, Servlets, and Spring MVC, following three-tier architecture to ensure separation of concerns and maintainability
- Implemented a React.js-based frontend featuring dynamic product filtering, shopping cart functionality, and responsive design for mobile and desktop platforms
- Integrated secure user authentication with password encryption (BCrypt) and session management to protect user data

Cattle Disease Pattern Prediction System

2024

Technologies: Java, Spring Boot, Spring Data JPA, MySQL, REST APIs, Maven

- Architected a Spring Boot application to analyze historical cattle health records using rule-based classification algorithms
- Developed comprehensive RESTful API endpoints for processing disease indicators, incorporating input validation and robust error handling mechanisms
- Implemented a data access layer using Spring Data JPA repositories for efficient database operations and query optimization
- Structured the application using a layered MVC architecture (Controller, Service, Repository, Model) with dependency injection to ensure high testability and maintainability
- Applied software engineering best practices including exception handling, logging (SLF4J), and comprehensive code documentation
